MATERIAL PROPERTIES

Applications	Material		Compare with	Free (Clamped) Dielectric Constant K^T_3	Coupling Coefficients k_{33}	k_{15}	k_t	$k_p(k_{31})$	Piezoelectric Charge Constants pm/V, or pC/N $d_{33}(d_h)$	d_{15}	d_{31}	Piezoelectric Voltage Constants mV•m/N g_{33}	g_{15}	g_{31}	Curie Temperature, °C T_C	Young's Modulus x10^{10} N/m^2 Y_{33}^E	Planar Poisson Coefficient σ_p	Mechanical Quality Factor (@ 4 MHz) $Q_{m,t}$	Dissipation Factor (max., @1 kHz),% $\tan\delta$	Frequency Constants Hz•m (kHz•in) N_t	N_p	N_{15}	Density, 10^3kg/m^3 ρ	Sound Velocity under E=0, km/sec $V_L(V_S)$	Acoustic Impedance under E=0, MRayl Z_L	Thermal Coefficient of Expansion, 10^{-6}/°C α
High temperature applications — ultrahigh temperature (up to 700°C) accelerometers, pressure, knock, flow and NDT transducers.	Bismuth Titanate	K-15		140 (133)	0.15	0.08	0.23	0.025 (0.015)	18 (14)	14	-2	15	10	-1.6	600	12	0.21	1800	3	2010 (79)	2515 (99)	1250 (49)	7.1	4.00 (2.50)	28	9
Very stable parameters under time, temperature and pressure variations, low acoustic impedance, low aging, and Q-factor. Used in flaw detectors, thickness gauges, accelerometers, HF hydrophones; and to measure acoustic emissions, pressure, knock, flow, level, and well logging under high pressure and temperature (up to 300°C). Its low dielectric constant coupled with a high frequency constant results in a lower capacitance for higher frequency driving and low acoustic impedance. Higher signal to noise ratio with low Q and low acoustic impedance. Shear and compressional resonance applications at medium to high frequencies, small diameter transducers, pulse-echo, NDT and imaging devices. Low dielectric constant with high shear coupling and high temperature stability. Large diameter and/or high frequency, high power radiators, such as sonar, medical therapy and HIFU. Highly resistant to depoling under severe mechanical stress and electric drive, low dielectric losses at high electric fields. High power acoustic transducers, for ultrasonic cleaning, welding and sonar, high voltage generators, medical therapy and HIFU. K-300 excels in high power applications, where high sensitivity, high mechanical quality and low dissipation factors are required. Extremely high piezoactivity k^2Q under strong electrical and mechanical fields with low dielectric losses. High power applications, HIFU. Advanced high drive materials for high power transducers, small HIFU elements, imaging/therapy. K-320 is a PZT-4D and PZT-8 alternative that improves efficiency and conserves power. Widely used for general purposes, hydrophones, accelerometers, level sensors, acoustic emission, pressure, flow, NDT, medical, knock, sonar, igniters. K-500 has high dielectric constant and stable piezoelectric constants, similar to K-350, good for arrays and composites. This material has high coupling and dielectric constants. Good for 1-3 composites, arrays, actuators, sensitive receivers and line hydrophone applications. Higher permittivity and piezoelectric constant make it an excellent choice for 1-3 composites, multi-element arrays, and actuator applications. NOTES:

1. All values are determined on standard samples for material characterization 10 days after poling, and are typical and nominal. All measurements are made in accordance with all relevant Military and Industry Standards, including IEEE, IEC, ANSI. Actual readings, measurements and calculations may vary with part geometry and product type depending on the manufacturing process and control conditions.
2. Typical maximum working temperature ~ (0.6...0.8) Tc, °C, maximum DC field ~ 0.55 MV/m (0.2 MV/m for K-15). Typical static compressive strength ~ 300 MPa, expansional ~ 18 MPa, bending ~ 50 MPa, dynamic strength ~ 15 MPa.

NOTES:

3. Typical tolerances ± 20% for dielectric constant, ± 10% for piezoelectric coefficients, and ± 10% for elastic frequency constants under normal conditions and low excitation level.
4. The sign of thermal expansion depends on polarization direction. Specific heat capacity ~ 350 J/kg-K. Thermal conductivity ~ 1 W/m-K. Pyroelectric coefficient ~ 10 μC/m^2-K.
5. Resonance characteristics of low Q < 25 materials were determined with loss correction procedure. Data for d33 piezocoefficient determined by quasi-static method.
